

150 mA, ultra low quiescent current linear voltage regulator

Datasheet - production data

Features

- Input voltage from 1.5 to 5.5 V
- Very low quiescent current:
 - 1.0 μA (typ.) at no load
 - 1.4 μA (typ.) at 150 mA load
 - 1 nA (typ.) in OFF mode
 - 200 nA max. in OFF mode at 125 °C
- Output voltage tolerance: $\pm 2\%$ at 25 °C
- 150 mA guaranteed output current
- Wide range of output voltages: 0.8 V to 3.3 V in 100 mV steps
- Logic-controlled electronic shutdown
- Compatible with ceramic capacitor ($C_{\text{OUT}} = 1 \mu\text{F}$)
- Internal current and thermal limit
- Temperature range: from -40 °C to 125 °C

Application

- Mobile phones
- Digital still cameras (DSC)
- Battery-powered equipment
- Portable media players

Description

The STLQ015 provides 150 mA of maximum current with an input voltage range from 1.5 V to 5.5 V and a typical dropout voltage of 112 mV. The key feature of this device is its quiescent current, which is just 1.4 μA at maximum output current. The device is stable with a ceramic capacitor on the output. It offers very low quiescent current and extends battery-life of applications requiring very long standby time. The enable logic control function puts the STLQ015 in shutdown mode, reducing total current consumption to 1 nA. The device also includes short-circuit constant-current limiting and thermal protection. Typical applications are: portable and battery-powered systems, electronic sensors and microcontroller power supply.

Notes:

⁽¹⁾Dropout voltage is the input-to-output voltage difference at which the output voltage is 100 mV below its nominal value. This specification does not apply to output voltages below 1.5 V.

⁽²⁾During shutdown and at no load, P-channel leakage current flowing through the internal resistor divider causes the V_{OUT} rise.

⁽³⁾Turn-on time is the time measured between the enable input just exceeding V_{EN} high value and the output voltage just reaching 95% of its nominal value.
